

Game 1: Rhythm

- **Objective:** Develop pulse awareness and an understanding of timing-based cause and effect.
- **Mechanics:** The game displays a pulsing object, such as a drum, a heart, or a dancing animal. The child presses any Tomplay key (or claps) in time with the pulse. The system accepts any “letter” sent by the hardware, as the focus is on timing, not pitch.
- **Progression and Rewards:**
 - Stage 1: A simple pulse. Each correctly timed input produces a percussion sound and a star.
 - Stage 2 (Music): After a sequence of correctly timed inputs, background music starts playing, and the child becomes the “drummer” for that song.
 - Stage 3: The required rhythm follows a familiar song, such as “If You're Happy and You Know It.” Upon completion, the full song plays alongside a celebratory animation.

Game 2: Melody

- **Objective:** Connect pitch (low, middle, high) with visual position (bottom, middle, top).
- **Mechanics:** An on-screen character needs to collect items at three different heights, such as an apple on the ground, a bird on a tree trunk, and a star at the top of the tree.
- **Mapping:** The programmer maps only three keys: Low (C), Middle (E), and High (G).
- **Action:** Playing the low note moves the character down; the middle note moves it to the centre; the high note moves it to the top. This provides a visual introduction to the melodic ladder.

Game 3: Harmony

- **Objective:** Focus on collaboration, sensory tolerance, and creating something together through several notes played simultaneously to form a chord.
- **Mechanics:** The screen displays an empty scene, such as a seed in the soil. The game requires two or three children to work together.
- **Step by Step:**
 1. Student 1 presses and holds a key (C). The note plays continuously, and a stem grows on the screen.
 2. Student 2 presses and holds another key (E) while Student 1 continues holding theirs. A new note joins the first, creating harmony, and leaves appear on the stem.
 3. Student 3 (or the teacher) presses a third key (G). The three notes form a full, pleasant chord. On the screen, a beautiful flower blooms and glows.
- **Visual Language:** There is no need to display complex text such as “C Major Chord.” The reward is purely sensory: the combined sounds produce a beautiful, complete image on the screen.

Note to kiki: Because this game requires two or three children to press and hold keys simultaneously, the key rollover limit of the hardware must be tested when mapped.
